

Objective	Looking for an opportunity where I can add value by gathering insights from data that drive business decisions.	
Education	Ghulam Ishaq Khan Institute of Engineering Sciences and Technology (GIKI)	Topi, PK
	Bachelors of Science in Data Science CGPA: 3.38/4.00	2021 - 2025
	Govt. Islamia Degree College for Women	Hafizabad, PK
	FSc Pre-Engineering Grades: A	2020 - 2021
Work Experience	CCIXER Inc. USA	Remote
	-Served as an Associate Researcher Intern, focusing on "Idea Convergence into Business Reality", conducted in-depth market analysis, economic analysis, financial forecasting and presented the results to senior stakeholders. -Developed strategies to implement the business plan by extracting insights from data.	June, 2023 - September, 2023
Academic Projects	Uber Rides Analysis	
	Developed a PowerBi dashboard to gather insights from Uber's operational landscape, encompassing 1,154 rides across the USA, Sri Lanka, and Pakistan. Employed ELT pipeline, schema design, dynamic filtering, Funnel Analysis and drill-through features to show daily, weekly, and monthly ride trends.	
	Netflix Data Analytics	
	Conducted exploratory data analysis (EDA) and gathered interesting consumer insights from the viewing trends of the Netflix user base and generated recommendations by validating/negating multiple hypotheses using A/B tests.	
	Gender and Age Detector	
	Employed deep learning in Python to precisely identify a person's gender and age from a single facial image or webcam feed in Real-time using the Adience dataset with 88% accuracy and time complexity of 1.33 seconds, holding significant value for authorization, medical, and surveillance applications.	
	Cats and Dogs Classification System	
	Utilized Deep and Convolutional Neural Networks for an Image Classification project, demonstrating automated feature extraction, outcome visualization, and unsupervised assembly of similar images.	
	Android App Market at Google Play	
	Conducted Android App Market Analysis using Python, involving a thorough examination of over ten thousand apps on Google Play.	
	Energy Efficiency Analysis	
	Employed machine learning models (Multiple Linear Regression with 90% accuracy, Single Value Decomposition with 95% predictive accuracy) using Python to predict heating and cooling loads in buildings based on structural parameters, utilizing the Energy Efficiency dataset from the UCI Machine Learning Repository.	
	Inventory Management System	
	Developed with MySQL, the system involves creating and managing databases to streamline sourcing, storing, and oversight of a company's inventory throughout the entire lifecycle, from purchasing and production to end sales.	
	The Sales Spectrum: Diving into the Supermarket Transaction	
	Conducted advanced Python analytics on sales data to decipher customer behavior, segment markets, and predict trends. It aims to understand historical patterns, forecast trends, and enable proactive responses to changing customer dynamics.	
	GIKIGO Game	
	Implemented location-based platform using various shortest-path algorithms and Data Structures concepts using Python, to calculate the shortest distance between two vertices and retrieve information for specific locations within GIKI.	
	Image and Voice Analyzer	
	Developed an AI tool using LLMs for visual and audio analysis. Integrated Transformers and OpenAI's Whisper within a Gradio interface for real-time, interactive data processing.	
	Gen AI powered Sketch-to-Realistic image synthesis	
	Executed a generative image modeling project using the MIT-IBM Watson AI Lab's Image Generation framework and the Mask Sketch model. This project demonstrated precision in generating class-specific images from abstract sketches, showcasing advanced capabilities in adapting and refining visual outputs.	
Awards & Achievements	- Dean's Honor Roll: Awarded with Dean's Honor Roll in Bachelors. - National Level Scholarship (PEEF) winner: Won merit-based scholarship during bachelor's for excellent academic performance.	
Skills	- Power BI, MySQL, Oracle DB, LLMs, Gen AI, Python (NumPy, Matplotlib, Seaborn, etc.), R, Apache Superset, Tableau, C/C++, HTML5, CSS, Java, JavaScript, Assembly language, Spreadsheets, Word, Excel, PowerPoint, Machine learning, Data Mining, ETL, Digital Image Processing. - MATLAB, Proteus, Multisim, Shell programming, Cisco packet tracer.
