SKILLS

- Material Takeoff & Cost Estimations
- Construction Site supervision & Execution
- Building Structural Component Analysis & Design
- Risk Management
- Project Management
- Strong Decision-Making Skills
- Complex Problem-Solver
- Pressure Handling Ability

SOFTWARE SKILLS

- Plan swift
- Blue Beam
- Revit
- Auto Cad
- SAP
- Primavera
- SWMM
- Microsoft Office
- GIS

SUMMARY

I am a highly motivated and service focused civil engineer with expertise in executing, supervising and managing construction projects on site and prepare material takeoff and cost estimation across all trades. Skilled in field data analysis and risk assessments to identify potential hazards and develop effective mitigation measures. Proficient construction software like Primavera to deliver projects within budget and on time. Dedicated to providing high-quality service and staying updated on industry trends to offer innovative and sustainable solutions to clients.

EXPERIENCES

Estimation Engineer

Firs Bidding LLC

February 2022-Present (1yr-3months)

- Estimation engineer with experience in preparing material takeoff and cost estimation for construction projects based in the United States.
- Skilled in analyzing construction drawings and specifications to accurately determine the required quantities of materials and labor.
- Proficient in utilizing software tools to efficiently estimate project costs, including Excel, Bluebeam, and Plan Swift.
- Strong knowledge of construction industry standards and regulations, allowing for the preparation of reliable and accurate estimates.
- Continuously seeking to stay up-to-date with the latest industry trends and best practices to provide innovative and sustainable solutions for clients.

Site Engineer

AKRSP (Aga Khan Rural Support Program)

February 2021 - February 2022 (1 year)

- Supervised various infrastructure projects including MHPs (Micro Hydro Powerplants), steel Jeepable bridges, roads and water channels.
- Conducted site inspections to ensure adherence to project specifications and standards.
- Collaborated with team members and stakeholders to effectively communicate project progress and resolve issues.
- Gained knowledge and experience in the implementation of sustainable and innovative solutions in infrastructure development.

LANGUAGES

- English
- Urdu
- Pashto

HOBBIES

- Playing Cricket
- Watching Movies
- Travelling

Site Engineer

Taj & Co Construction Company

July 2020 - December 2020 (4 months)

- Managed construction projects on the ground, making sure specifications and standards were met.
- Worked effectively with team members and stakeholders to achieve project objectives.
- Conduct regular site inspections to track progress, identify potential problems, and implement solutions.

EDUCATION

BSC Civil Engineering (2016-2020)

[University of Engineering & Technology Peshawar](#)

CGPA: 3.3

FSC Pre-Engineering (2014-2016)

[Diamond Model School & College Bakerabad](#)

Percentage: 75%

CERTIFICATIONS

Surveying

University of Engineering & Technology Peshawar

June 2019 – August 2019 (2 months)

- Conducted a 1-month practical work in topographical surveying of land and cross-sectional/longitudinal surveying of roads
- Utilized various instruments including Auto level, theodolite, and total station
- Performed triangulation for area calculation of land and topographical surveying to create contour maps
- Produced contour maps for the land and conducted profile and cross-sectional surveying of roads
- Determined the formation level for roads and estimated the amount of cut and fill needed.

FINAL YEAR PROJECT

Bond Beams & Tie Columns

University of Engineering & Technology Peshawar

- Conducted a literature-based study on the seismic performance of buildings with bond beams and tie columns around openings, such as doors and windows.
- Investigated the effect of these structural features on the seismic performance of buildings.
- Analyzed the data collected from the literature review to determine the effectiveness of bond beams and tie columns in enhancing building seismic performance.
- Explored the potential benefits of implementing bond beams and tie columns in building designs to increase seismic resilience.

OTHER PROJECTS

Push Over Analysis of Building In SAP

University of Engineering & Technology Peshawar

- Conducted a project on pushover analysis of buildings using SAP software.
- Explored the behavior of buildings when they were provided with braces.
- Analyzed the structural response of buildings to lateral forces.
- Assessed the capacity of the building to resist collapse during an earthquake.
- Used mathematical models and simulations to predict the behavior of buildings under seismic loads.
- Developed an understanding of the factors that affect the structural performance of buildings.

Rainfall Runoff Determination Using SWMM Software

University of Engineering & Technology Peshawar

In this practical work, I studied the relationship between land behavior during rainfall and the discharge of water from a catchment area. To conduct this analysis, I utilized the Storm Water Management Model (SWMM) software, which is a powerful tool for simulating urban stormwater runoff and drainage systems.
